Nest Roommate Matchmaker Demo Script

INFO 6150 Group Project

1. Open the app

• Open index.html in a browser using VS Code Live Server or a local browser preview.
• You should see the login screen with the university email and password fields.

2. Demo registration

• Click Create one.
• Enter a username such as karthik123.
• Use a valid university email such as karthik@northeastern.edu.
• Set a password with at least 8 characters, 1 uppercase letter, and 1 number, such as Strong12.
• Submit the form and show the redirect to the home page.

3. Demo login validation

• Try an invalid email like user@gmail.com and note the validation error.
• Try a weak password like weak and note the live checklist errors.
• Show the alert summary and how the invalid field gets focus.

4. Demo successful sign-in

• Use a valid .edu email and a correct password.
• Check Keep me signed in if desired.
• Click Sign in and show the redirect to the home page.

5. Demo landing page

• Explain the match meter and how the house windows light up based on your answers.
• Filter profiles by Night owls, Early birds, Quiet, or Social.
• Open a profile modal and show the saved-roommate functionality.
• Click Save to add a roommate and show the offcanvas panel.

6. Demo logout and session behavior

• Open the user dropdown.
• Choose Sign out.
• Note that the app returns to the login page.
• Optional: refresh the page and verify the session logic behaves as expected.

7. Reset demo state

• Open browser DevTools !’ Application / Storage !’ Local Storage.
• Clear the nestAccounts and nestUser values to reset the app.
